

**“Portfoliowide alarm visibility -
simplified in a single cloud based
interface.”**

What is iBOS Alarms?

iBOS Alarms brings all your building alarms into one clear, centralized view, giving facility and operations teams full visibility and control across their entire portfolio. Built as an add on to iBOS Edge BMS and accessed through iBOS Connect, it delivers secure, aggregated alarm management without additional setup or complexity.

Key values of iBOS Alarms:

A single, cloud-based interface showing all alarms across all buildings.
Reduced risk of missed alarms and delayed responses Facility teams can focus on what matters, not everything that blinks.

Centralized Monitoring: Aggregate all alarms from different buildings and systems in a single interface. Eliminate the need to switch between multiple dashboards and ensure every critical alert is seen and acted upon.

Granular Access Control: Manage exactly who can view or handle each alarm with rolebased access inherited from iBOS Connect. Maintain accountability and ensure compliance across teams and properties.

Smart Favorites & Filtering: Quickly locate and prioritize alarms by type, status, property, or custom tags. Save personalized filters for fast access to your most important views.

Futureready and scalable: Easily extend alarm management as your portfolio grows. New buildings or alarm types added in iBOS Edge BMS are automatically integrated into iBOS Alarms.

Built on the Power of iBOS: The addon for Alarms works seamlessly with your existing iBOS Edge BMS and iBOS Connect platforms, using the same login, permission structure, and data model you already trust. Activation takes minutes, putting portfolio-wide alarm visibility at your fingertips.
